## ABOUT ME

---

I am a slovak student studying in final year on Vocational Highschool of Jozef Murgaš. I have a interest in web development and I would like to broaden my horizons by learning new technologies, languages and frameworks.

## PROJECTS

---

### PRO DRON SHOT - website

Modern, dynamic website for a company specializing in shooting videos and photos with a drone, then editing the footage to suit the customer. It is a basic HTML and CSS website with clean responsive design, and animations using javascript. It has a clean white UI and it allows user to see all previously recorded footage of previous projects. It also allows the user to see detailed description of each service provided by the company as well as the basic information about the company, such as the process of their work, information about each member of the team and their values which they adhere to. Moreover, SEO of the website has been optimized to show amongst the top results in search pages.

### Hemar s.r.o. - website

Professional website created for a company called Hemar s.r.o. This company focuses on electrical installations, welding and machine repairs. The websites main goal is to give this company some online presence and show the world their works. This website is coded in HTML and CSS, with responsive design provided by the careful styling of the page. This website has also javascript animations ensuring dynamic UX. UI is designed by using a combination of white, blue and orange color, white being the most prominent in the page, blue being used as a secondary color, and orange being used for highlights on blue background.

### Centrum mládeže karate (CMK) - website

Dynamic website with a built-in admin panel with multitude of features such as content management, log-in and dynamic content manipulation. This website was created for a local karate club, it was specifically tailored for the needs of the club, the main structure and styling are coded in HTML and CSS but the most prominent language is PHP. Using PHP, the contact form and admin panel are made to work as they do. The website is also equipped with many javascript animations ensuring smooth browsing experience. The UI was designed using Figma. The UI is built on prominent combination of red and white with high contrast. On this project I collaborated with Marek Keľo.

### Neurolocus s.r.o. - website

Front-end version of a website for a neurological clinic in Banská Bystrica called Neurolocus s.r.o. So far this project has not been published, therefore the front-end version is placed on my Git-Hub in a public repository. The website is coded in HTML and CSS with javascript being used for animations and overall dynamic of the website. This website was designed by a slovak graphic designer from Rimavská Sobota and the back-end version is being coded by my

acquainted web developer Marek Keľo, he is responsible for coding a content management system for this website alongside a contact form linked to the email of the clinic.

## CREATIVE WORKS

---

### Tobias Biščák - Portfolio Website

Professional portfolio website for Tobias Biščák, a graphic designer and multimedia creator. Showcases work, skills, services, and contact information with a modern, visually appealing interface. The portfolios main focus is to show the work of this young graphic designer using modern technologies and software. This website was coded as a result of an agreement between me and Tobias. I used HTML web structure, CSS to style the website and JavaScript for dynamic animations to bring his design to life.

### Multispark - website

Multispark is a modern creative studio providing cutting-edge digital solutions for businesses of all sizes. They combine creativity and technology to create exceptional experiences for your customers. Their website has modern UI combining many colors and fonts to blend into pure perfection. This website showcases the works of a group of students in graphic design, web development, video editing, audio editing, photography and 3D modeling. Structure of this website is coded in HTML and styled by CSS with dynamic JavaScript animations to highlight certain elements and to make the UX more smooth and soothing.
